COMPLY WITH SERVICE LEVELS AS SET OUT IN A CONTACT CENTRE OPERATION

US 10313

SECTION B:SUMMATIVE ASSESSMENT

TASK 1

REPORT ON COMPANY SPECIFIC SERVICE LEVELS

Company: AVBOB Mutual Assurance Society

Department: Contact Centre Operations

Prepared by: Fikile Mkhize

Date: 13 August 2026

Subject: Understanding of AVBOB Contact Centre Service Levels

1. Introduction

AVBOB is a mutual assurance company in South Africa that provides funeral cover and related services. The contact centre handles inbound calls for policy queries, claims, cancellations, and outbound calls for policy reviews and arrears. To ensure consistent and compassionate service, AVBOB has set specific service levels that all agents must understand and meet. This report explains the purpose and requirements of those service levels.

2. Purpose of Relevant Service Levels

2.1 Average Speed of Answer - ASA

To ensure that members and beneficiaries receive assistance quickly, especially during bereavement. Fast answering reduces caller stress and shows AVBOB's commitment to caring service.

2.2 First Call Resolution - FCR

To resolve member queries on the first contact. This prevents families from having to call back multiple times during difficult times and improves customer satisfaction and trust.

2.3 Call Quality - QA Score

Fikile Mkhize

To maintain compliance with financial advisory and intermediary services and the Long-term Insurance Act. High call quality ensures agents use the correct tone, empathy, and legal disclosures, protecting both the member and AVBOB.

2.4 Abandonment Rate

To measure how many callers disconnect before being assisted. For claims and emergency calls, a low abandonment rate is critical because delays can impact funeral arrangements.

3. Requirements of Service Levels

3.1 ASA Requirement

Target: 80% of calls answered within 20 seconds

Requirement: Agents must log in on time, minimize After Call Work, and be available in the correct skill. Supervisors monitor real-time dashboards and adjust staffing during peaks.

3.2 FCR Requirement

Target: 78% of calls resolved on first contact

Requirement: Agents must be fully trained on policy rules, claims documentation, and system navigation. Use the CRM to verify policy details immediately and avoid unnecessary transfers.

3.3 Call Quality Requirement

Target: Minimum 90% QA score per month

Requirement: Agents must follow the AVBOB call script, use empathetic language, confirm FICA and consent, and capture accurate call notes. Monthly QA evaluations and coaching are conducted.

3.4 Abandonment Rate Requirement

Target: Less than 4%

Requirement: Proper IVR routing to Claims, Service, and Sales. Offer call-back functionality during high volume. Workforce Management must forecast accurately for pay dates and holidays.

4. Conclusion

Understanding and meeting AVBOB's service levels is essential to providing timely, compliant, and empathetic service. By adhering to ASA, FCR, QA, and Abandonment targets, the contact centre supports AVBOB's brand promise of dignity and care to all members.

Fikile Mkhize

Task 2

a)At Avbob I would implement and monitor service levels by:

1. Daily briefings: Team leaders remind agents of ASA, FCR and QA targets at start of shift.

2. Real-time monitoring: Supervisors use the ACD dashboard to track ASA and queue length. If ASA goes above 20s, we pull in agents from other queues.

3. QA monitoring: 3-4 calls per agent per month are recorded and scored against the QA checklist. Feedback given in 1-on-1s.

4. Weekly reporting: KPI reports for ASA, FCR, Abandonment are shared with the team. Agents below target get coaching.

b) - ASA: 80% within 20 seconds

- FCR: 78% resolved on first call

- QA Score: 90% and above

- *Abandonment*: Less than 4%

- Adherence: 90% to schedule. Timeframes are measured daily, weekly and monthly.

c) 1. Preparation: Log in 5 minutes early, check system and be rea when queue opens.

2. Time management: keep ACW under 2 minutes and breaks on time to maintain adherence.

3. Product knowledge: Study policy updates weekly so I can resolve without transferring.

4. Self-monitoring: Check my own stats on the dashboard after each shift and ask TL for help if I see a dip.

5. Teamwork: During peaks, assist on chat/email to reduce pressure

Subject: Constraints in Meeting Avbob Service Levels

Introduction

Service levels at Avbob are critical because we deal with sensitive customer needs. However, several constraints can affect our ability to meet targets.

Findings

1. High Call Volumes: Month-end, public holidays, and winter months increase bereavement and claims calls. This pushes ASA up and FCR down.

2. System Downtime: If CRM or policy system is slow, agents take longer to resolve, affecting AHT and FCR.

3. Staff Shortages: Sick leave and resignations lead to low adherence and higher queues.

4. Complex Queries: Some claims need documents from branches, so they cannot be resolved on first call.

5. Emotional Calls: Bereavement calls take longer due to empathy required, which impacts ASA and AHT.

Recommendations

- Improve forecasting to schedule more staff during peak periods

- Have IT support on standby for system issues

- Cross-train agents to handle both service and claims

- Use call-back options to reduce abandonment

Conclusion

While constraints exist, with proper planning, training and monitoring, Avbob can continue to meet service levels and provide compassionate service.
