ROLES IN AN IS DEPARTMENT

Key roles and their purposes

1. CIO Sets IT strategy and budget.
2. IS Manager Runs daily IT operations
3. Systems analyst Gathers business requirements
4. Systems designer Designs system architecture
5. System programmer Builds and codes systems
6. DBA Manages and secures data
7. Network admin Manages bank network and branches
8. Info security officer Ensures POPIA and cyber security
9. QA Tester Tests systems before launch
10. Help desk Support staff IT issues

role	Key tasks	Main question
System analyst	Gather requirements, analyse processes, write specs	What must the system do ?
System designer	Design database, UI, architecture, technical specs	How will the system work?
System programmer	Write code, test, debug, maintain software	How will we build it?

MODEL AND LEADERSHIP

Centralised model chosen

Why Centralised?

- Banks require strict control and standard security
- Easier to comply with POPIA, FICA, SARB regulations
- Consistent policies across all branches
- Central management of data and risk

Top position- CIO- Chief Information Officer Reports to CEO and Board

THE KEY UNITS

1. Systems Development Builds core banking, mobile app ,loan system
2. Infrastructure and networking Manages server network, ATMs ,branch connectivity
3. Database and security Protects customer data, backup , fraud prevention
4. User Support and training Helps staff performance and trains on new systems

KEY RESPONSIBILITIES

CIO :IT strategy, compliance, budget

IS Managers: Lead their units, Manage projects and staff

Analyst : Understand banking needs from business

Designers: Turn needs into technical plans

Programmers: Build secure, reliable banking software

DBA and security: Keep customer data safe

Network and support: Ensure no downtime for branches and online banking

MOTIVATION

Why this design?

1. Size : Large bank needs specialized teams
2. Security: Dedicated security units for POPIA compliance
3. Uptime: Multiple staff ensure ATMs/ online banking is never down
4. Specialization: Separate Development and infrastructure teams for core banking systems

- This Centralised structure provides security, efficiency and support needed for a large bank’s operations.

THANK YOU.
Q & A

Let’s discuss questions
as a team.
